http://www.eeqaz.org/index.php/guidance/fatawa/139-pakulama-fatawa-Uكـز

Type following code and run. Try to understand before going ahead.

## class Lab09\{

public static void main(String []args)\{
int i;
String numbers[]=\{"Zero", "One", "Two", "Three", "Four", "Five", "Six", "Seven", "Eight", "Nine", "Ten" \}; int $\mathrm{n}=($ int $)$ (Math. random()*11); System.out.println("Number is:"+numbers[n]);
\}
\}

Hope you can appreciate array that saved ten checks.
Task 1: Extend above program for zero to Nineteen.
String numbers[]=\{"Zero", "One", "Two", "Three", "Four", "Five",
"Six", "Seven", "Eight", "Nine", "Ten"\};
Array statement can be broken into multiple lines as shown above.
Task 2: Once again extend task 1 to generate a random number 1-99 both

## Output:

 inclusive and print output as given.Number is: 32
Number is: Thirty Two
Hint: Use another arrays of tens to store "Twenty", "Thiry","Fourty"...,""Ninty". Use integer division and remainder to separate digits than apply some checks to produce given output. Don't apply check like if ( $n==3$ ) ? "Three", rather print from array.

If you stuck leave this task for later attempt
Task 3: Declare an integer array of size 5. Take input from user. Find and print average. Count and print how many values are less than average?

Task 4: Declare an integer array of size 10. Initialize it randomly by values between -50 to 50 . Print all values in single line. In next lines print negative numbers in single line followed by positive numbers in single line.

Task 5: Declare an integer array of size 10. Initialize it randomly by values 5-10. Using nested loop to print stars in ten lines according to value in each subscript. See output for guidance.
Hint: for $\mathrm{i}=1$ to size of $\mathrm{A}\{/ /$ suppose A is array

$$
\begin{aligned}
& \text { for } \mathrm{j}=1 \text { to value of } \mathrm{A}[\mathrm{i}] \\
& \text { print starts } \\
& \text { move to next line } \\
& \}
\end{aligned}
$$
